Final Group Project

The *On the Grind* website has some updates from the last time you've seen it. We are happy to present a better and updated version. Previously during our presentation, we had some technical difficulties, so we were not able to present some of our hard work. Now, we have made some changes to the look of the website and we are happy to finally present to everyone. We all took part in making the overall aesthetic of the website, but Litzy made some changes in order to unify all the pages. She also changed the gif that we initially had on our homepage to a video, which was more appealing to watch. She also changed the color scheme of the overall site. We also have the filter function working on our product list, which Mary had worked on. She also added some shirts to our products. Customers are able to filter out whether they are trying to purchase coffee beans, tea leaves, or our merch. We also have an improved version of our cart and checkout pages. Customers are able to add to their cart and the total will dynamically increase as more products are added to the cart. Users are also able to remove items directly from the cart page. This was mainly handled by Marc. The registration and login needed the most work as it requires us to create the database in order for it to be functional. Jhon was working on this and faced many issues. We all had to come together and figure out how to work the database.

This one was probably the project we struggled with the most. There were many issues trying to create and connect our database in order to make our registration and login work. We

tried following tutorials, but it caused us other problems. Marc was able to create something, but his VM crashed and when he pushes, it does not work on our end. Overall, we were able to fix our website other than the login and registration page. We believe that if we had more time, we would have been able to solve the problem. We are happy with how our website turned out so far. If we have the chance we will make more improvements.
